Northern Lights Resources Highlights Gold and Silver United States Portfolio

Vancouver, British Columbia - (January 8, 2026) – Northern Lights Resources Corp. (“Northern Lights” or the “Company”) (CSE: NLR) (OTC: NLRCF), is pleased to provide an update on its United States Assets portfolio, highlighting a strategic royalty interest in Nevada and its 100%-owned flagship gold project in Arizona.

Medicine Springs Project – 1% Net Smelter Return (NSR) Royalty

Northern Lights holds a 1% Net Smelter Return (“NSR”) royalty on the Medicine Springs Project, located in the Ruby Mountain Valley of northeastern Nevada. The project is currently optioned and operated by Torex Gold Resources Inc. (TSX: TXG), a well-established gold producer.

Historical exploration and drilling by previous operators have identified potential for silver, lead, zinc, copper, and gold mineralization, hosted in multiple mineralization styles including carbonate replacement deposits (CRD), porphyry, and skarn systems.

The Company views its NSR interest at Medicine Springs as a strategic, non-dilutive asset that provides long term optionality and leverage to potential future development or transaction activity, while allowing Northern Lights to maintain focus and capital discipline on its core exploration portfolio. Management believes the royalty represents meaningful embedded value and aligns with the Company’s strategy of retaining upside exposure to high quality assets without ongoing capital commitments.

Secret Pass Gold Project – 100% Owned

Secret Pass, located in the historic Oatman–Katherine gold district of northwestern Arizona, a cornerstone asset for Northern Lights. The project benefits from excellent infrastructure, year round access, and a prolific regional setting that has produced several million ounces of gold historically.

Building on prior drilling, surface sampling, and geophysical work, the Company plans to advance Secret Pass in 2026 through a focused, technically driven exploration program. The historic voluminous data set afforded us a rapid, low-cost entry into what is clearly showing as a high-grade camp. Planned work is expected to include:

- A comprehensive review and integration of historical geological, geochemical, and geophysical datasets
- Refinement of the geological model to accelerate the development cycle and optimize drill targeting; and

- A full updated recompilation led by Steve McMullan a PDAC award-winning geologist.

With elevated gold prices driving renewed activity in the district, including the restart of nearby mines previously on care and maintenance, the Company believes Secret Pass offers significant discovery potential and remains underexplored relative to the scale of the mineralizing system. Northern Lights believes the project provides a strong springboard for value creation through the application of modern exploration techniques.

Looking Ahead

As the Company moves into 2026, Northern Lights intends to maintain a disciplined exploration approach while advancing projects with the greatest potential to create shareholder value. The combination of direct exploration upside at Secret Pass and non-dilutive optionality through the Medicine Springs NSR royalty positions the Company with multiple avenues for value creation.
